

# Smugglers Equestrian Centre & Riding School

## CASE STUDY

The outdoor manège is now lit to competition level,  
and is an ideal space for show jumping events.

## The Project

Smugglers Equestrian Centre & Riding School is a well-established horse riding centre, set in the picturesque rural countryside of Manmoel, South Wales. The Equestrian Centre provides a wide range of activities, including lessons, activity days, hacks and riding for under 5's. Facilities include a livery for approximately 100 horses, an indoor teaching area and a newly-built outdoor manège.

CTP Electrical was appointed to lead the lighting project for the new manège; they proposed and designed the new lighting system. CTP's lighting designs and savings calculations revealed that NET LED products would provide the light output, durability and energy efficiency that would meet all the requirements of the project.

## The Solution

Robust, high-output Benwick LED High Power Lights were installed in the manège. Featuring an asymmetric beam angle, the fittings allow a longer throw of 5000K light, making them an ideal choice for outdoor sports facilities.

With IP65 and IK10 rated housings, the LED High Power Lights are protected against water, dust, external impact and vibration, making them suitable for outdoor applications.

From enquiry to order, NET LED supported the wholesaler's business. Throughout the process, NET LED's Sales Team were on hand to ensure the wholesaler had all the information needed to go ahead with the installation.

With next day delivery on orders placed before 5pm, the LED High Power Lights were delivered to site quickly and efficiently to ensure the installation would run smoothly.

## The Result

Smugglers Equestrian Centre has been delighted with the light output and durability of the LED High Power Lights.

The outdoor manège is now lit to competition level, and is an ideal space for show jumping events.
